Hon. Hugh J. A. Flemming, Q.C.  
Minister of Health  
HSBC Place, 5th Floor  
P.O. Box 5100  
Fredericton, NB, E3B 5G8

Dear Minister Flemming,

**Re: scientific evidence to justify vaccine mandates and vaccine passports**

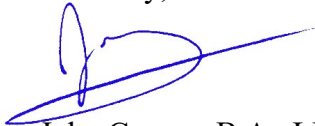

It appears that your government's policies are predicated on the notion that people who have received the new mRNA vaccine, or another Covid vaccine, are less likely to spread the virus than people who have not received a Covid vaccine.

Specifically, what scientific research supports your position that people who have not received a Covid vaccine are worse spreaders of viruses than those who have received such vaccine?

We request that you provide us with copies of the medical and scientific papers, studies and reports on which your government's mandatory vaccination policies are based. Alternatively, we request that you email us links to these studies, by responding to [media@jccf.ca](mailto:media@jccf.ca).

We look forward to hearing from you.

Sincerely,

John Carpay, B.A., LL.B.  
President
